Valentine Mystery

## A DOGGONE MYSTERY

Three dogs are three different colors. Each one has a different name and wears a dog collar. Each dog collar has a different jewel.

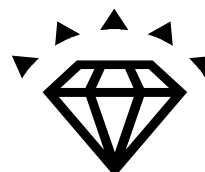

- Comet isn't the brown dog with an emerald collar.**
- Sam, the black dog, doesn't wear a diamond collar.**
- Trixie is the name of one of the dogs.**

From the clues above, find out the name of each dog. Also figure out each dog's color and the jewel on its collar.

**Write your answers in the solution box.**

Read the instructions below and use the grid for help.

- Inside the grid, place an a check mark on the "yes" information.**
- Place an X on the "no" information.**

The first sentence tells you Comet is not brown - "no" information - so an X is placed on the grid connecting Comet and brown. Comet also is not wearing the emerald collar, so put an X connecting Comet and emerald.

The brown dog has an emerald collar - "yes" information - so put a check mark connecting brown and emerald collar.

**Solution Box**

Dog	Color	Jewel
Comet	White	Diamond
Sam	Black	Sapphire
Trixie	Brown	Emerald

Comet is not the brown dog or black dog, so Comet is white.  
 Sam is the black dog, so Trixie must be brown.

Trixie wears the emerald since Trixie is the brown dog.  
 Sam wears the sapphire since Sam does not wear the diamond or emerald.  
 So Comet must wear the diamond.
